### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To increase production we have:

Pulled tubing. Ran sand pump and cleaned out to 3300'. Acidize open hole from 3262'-3325' with 2000 gallons of regular 15% acid. Tested and returned to production at one barrel of oil per day.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
