New Mexico

(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is **2991** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

At the total depth 3280' in Line this well flowed 22 barrels pipe line oil in 24 hours through 2" tubing. In an effort to make a top well allowable producer of this well, we desire to shoot it from 3120' to 3280' with approximately 310 quarts of nitroglycerine. The shot will be tamped with approximately 3 yards of pea gravel and the hole loaded with oil.

Results of shot will be reported within 10 days after shooting well and cleaning out.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
