Waves (Field) Lea (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 2945 ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On March 8, 1951, approval was requested to acidize the subject well through casing perforations from 3200 to 3210' and 3187' to 3196' with 2,000 gallons. The approval was granted on March 9, 1951.

Since that time, however, it has been decided that the well will not be acidized.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
