### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On a recent test, 3-18-61, this well pumped no oil and 201 bbls. of water in 24 hours.

We propose to pull rods and pump, run a radioactive tracer survey over the Yates and Seven Rivers perforations and shut the well in pending results of the tracer survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
