RE: Pike Federal No. 1  
Unit A - Section 6,  
T23S - R38E,  
Lea County, New Mexico

Gentlemen:

Please find attached a copy of your Form C-103. The subject well was originally drilled by Amoco as a triple completion in the Blinebry, Tubb, and Drinkard. The completion consisted of three strings of tubing and two production packers to isolate the three zones.

In January of 1978 the Tubb tubing became plugged off due to paraffin and lost tools. In December, 1979 a 2" plug was set in the Drinkard string at 6850', and the Drinkard tubing was perforated from 6199' - 6264'. This work left the Drinkard temporarily abandoned with the Tubb zone producing up the original Drinkard tubing. Last production for the Blinebry was June, 1982.

Effective February 1, 1987, Petrus Oil Company purchased this property from Amoco Production Company. Effective November 1, 1989, John H. Hendrix Corporation purchased the property from Petrus.

Starting January 26, 1991, John H. Hendrix Corporation started attempting to retrieve the tubing strings and clean them out. An excess of \$100,000 was spent in cleaning out the well due to stuck tubing and packers. Due to the high

risk of three tubing strings and packer getting stuck again, we ran the tubing, RBP and packer as reported on the attached C-103. We plan in the near future to request permission to down hole commingle the three zones.

Thank you for your consideration in this matter. If you have any questions, please call

Yours very truly,

Ronnie H. Westbrook  
Vice-President
