DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The notice of intention to drill filed 2-23-60 indicated a depth of 12,000' as the estimated total depth of this well.

This notice of intention to Change Plans would place the approximate estimated total depth in the Ellengur formation to be between 13,000' and 13,500'.

No other change in plans is anticipated at this time.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
