(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. 2-Self is located 1980 ft. from N line and 660 ft. from E line of sec. 7
NW/4 26S 38E NMP
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to a total depth of 3976' with cable tools flow of approximately 4 bbls. per hr. of sulphur water was encountered @3860' which made further drilling below 3976' impossible with present equipment. We wish to suspend operations with the possibility of moving rotary equipment and exploring lower beds. Hole will be protected in the following manner:

Plug back with cement from TD to 3700 to shut off sulphur water. Fill with 10# mud to 1340. Set plug and cement to 1330. Pull 10 3/4 casing then set plug @ 1070' to shut off water fill with mud into surface pipe cap well until other operations can be started

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
