DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill a 4000' Queen test with rotary.

We propose to set approximately 375' of 8 5/8" surface casing with 100 sacks.

We plan to run 4 1/2" production casing through any pays and cement it with 200 sacks.

All casing will be run and cemented under methods approved by the U. S. Geological Survey.

* Sufficient cement to circulate on the 8 5/8" casing and to return above the top of the salt section on the 4 1/2" casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
