Well No. 8 is located 640 ft. from [S] line and 330 ft. from [E] line of sec. 30
SE/4 SE/4 Sec. 30 26-S 37-E N47W
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
N47W Las New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill a well with rotary tools at the above location to an approx total depth 6000'. Plans call for testing the Blinberry formation (Upper Yess) at the total depth and completing in the Jalmat Pool at approximately 3300'. Casing will be set in accordance with USGS Regulations and other special requirements will be complied with.

The following casing pattern is planned: 9 5/8" OD 36# H-40 casing set at 400' w/290 ex ent. Cement to circulate. 7" OD 20# J-55 casing set at 3300' w/400 ex ent., set to return to 2950'. If production is obtained in the Blinberry, a 4-1/2" OD 9.5# J-55 liner will be installed from 3290-6000' with 800 ex ent. Cement to return to the 7" casing.

Permission to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
