## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After further evaluation, it has been determined that there are no further possibilities of commercial completion of well. We propose to plug and abandon as follows: Load hole with mud and spot 25 sx cement plug over perforations 3080-97'. Cut and pull 5-1/2" casing from indicated free point. Spot 25 sx plug in and out of 5-1/2" casing stub; 25 sx plugs at 2740', 1290' and 329'. 10 sx plug at surface with PXA marker erected. Clean, level and restore ground to its natural contour.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
