Ed. Payne April 6, 1964
Well No. 1 is located 660 ft. from N line and 660 ft. from E line of sec. 21
21 (1/4 Sec. and 1 Sec. No.) 26 South 32 East N.M.
(Twp.) (Range) (Meridian)
Artesia 100 New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3140 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On April 3, 1964 a 30 sack cement plug was spotted from a total depth of 4512' back to 4200', cementing off perforations in 4-1/2" casing located at 4448' and from 4462-68'. 4-1/2" casing was then shot off at 3890' for recovery.

Two 20 sack cement plugs were then spotted through 4-1/2" casing as it was being pulled. These plugs were from 2800 to 2950 above top of salt at 2942', and from 350' to 450' bridging base of 8-5/8" surface casing set at 428'. Mud spotted and circulated between plugs.

On April 4 a 10 sack cement plug was placed in top of 8-5/8" surface casing, and regulation marker erected. Mud and reserve pits will be filled, and location cleaned up for final abandonment in the early future. Will advise when this has been done.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
