DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill this well with rotary tools to test the Delaware sands expected to be encountered at a depth of approximately 4400 feet.

Approximately 400 ft. of 8-5/8" OD Surface Casing will be set and cemented back to surface. 6-3/4" hole will be drilled from this point to the top of the Delaware sands where coring will be employed to total depth.

If production is obtained, 4-1/2" Seamless Casing will be run to total depth and cemented in a manner satisfactory to the U.S. G.S.

(The above confirms my conversation with Mr. Brown as of date)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
