13. Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Citation has had success in recent years in recompletions in the Morrow A and B in the Antelope Ridge No. 's 2 and 3 and recent installation of a submersible pump to produce the remaining gas reserves in the Atoka B in Antelope Ridge No. 8. The Atoka here shows a weak water drive. We have recently purchased a 3 D seismic survey and expect receipt of the final version of this survey in early March. We are integrating the survey into our geological and reservoir description of the deeper Devonian. The reservoir description includes the simulation of the Devonian behavior using the Eclipse reservoir simulator. The target is to determine the potential for an additional drill location within the unit to completely develop reserves remaining in the Devonian as well as the shallower Morrow A, B and D zones. The Antelope Ridge Unit #4 could be a key to allowing the economic disposal of water from these horizons. Therefore, we would request an appropriate extension to allow us to complete our evaluation and finalize plans for added development.
