The subject well will be drilled to a depth sufficient to test the Drinkard formation, approximately to 6300'. The Drinkard, Tubb, and Blinebry formations will be selectively perforated, acidized, fractured, and tested in an attempt to make a dual Blinebry/Tubb-Drinkard oil well. Adequate pressure control equipment will be installed and maintained before the surface string plug has been drilled out.

* If the Tubb-Drinkard formation is found to be productive, the well will be prorated in the Teague Tubb-Drinkard Pool as a discovery well.
