Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was temporarily abandoned on June 17, 1976 by setting a CIBP @ 4100'. The CIBP was drilled out on February 12, 1980 in order to obtain a San Andres water sample for use in a water compatibility analysis, which indicated that the C. E. LaMunyon disposal water and San Andres formation water were compatible with each other.

It is proposed to convert this well for a salt water disposal well for the disposal of C. E. LaMunyon produced water into the San Andres formation by setting an injection packer on 2-3/8" IPC tbg @ approx 4100' in this well and tying it in with the existing C. E. LaMunyon disposal system, which is currently disposing into wells no. 6 and 9.

Approval has been received from the NMOC under Administrative Order No. SWD-222. If approval is not received for this proposal, the CIBP will be replaced and the well will be returned to temporarily abandoned status.
