Gentlemen:

Currently, the C. E. LaMunyon produced water is being disposed into the Teague Simpson McKee sand in our C. E. LaMunyon Wells No. 6 and 9, but we are unable to dispose of the entire volume of produced water into these wells. Therefore, we propose to convert our C. E. LaMunyon WSW No. 1, San Andres Pool, to a salt water disposal well in order that the produced water from the C. E. LaMunyon lease may also be disposed into the San Andres pay.

The surface use and operations plan for this proposal are as follows:

1. Existing Roads
Exhibit "A" is a portion of a U.S.G.S. topographic map showing the location of the subject well and access roads in the vicinity of this well. Note that the original pad and access roads will be used for this proposal.
2. Planned Access Roads
Not applicable.
3. Location of Existing Wells
Not applicable.
4. Lateral Roads to Well Locations
Refer to Exhibit "A".
5. Location of Flowlines
The only additional surface disturbance associated with this proposal is the laying of a two (2) inch water line (approx 3500' long) from the pump station to the subject well as shown in Exhibit "B". This line will be buried approximately two (2) feet and laid along a right-of-way approved by the surface owner (refer to Exhibit "C").
Archaeological clearance has been received for the subject proposal (refer to Exhibit "D").
