

Mr. Arthur Brown
U.S.G.S.
Hobbs, New Mexico

-2-

August 26, 1970

We found that, upon opening, the well would produce at a fairly high rate initially but the longer it flowed the more limited the rate became. These short-term tests indicate the ultimate absolute open flow to be less than 2 MMCF/D.

As a result of our tests, we find the well to be non-commercial in the Silurian interval. If you have any further questions regarding the results of this test, we will be happy to discuss them with you.

Yours very truly,

C. H. Alexander
