

All waste material will be contained to prevent scattering by the wind. Location of trash pit is shown on Exhibit "C".

- F. All trash and debris will be buried or removed from the well site within 30 days, after drilling and/or completion operations are completed. Pits will be leveled as soon as possible.

8. Ancillary Facilities:

None Required

9. Well Site Layout:

- A. Exhibit "C" shows the relative location and dimensions of the well pad, mud pits, reserve pit, trash pit and location of major rig components.
- B. Only minor leveling will be required. No significant cuts and fills will be necessary.
- C. The reserve pit will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. Plans for Restoration of the Surface:

- A. After completion of drilling and completion operations, all equipment not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. After abandonment of the well, surface restoration will be in accordance with an agreement with the surface owner.
- D. Drilling operations on these two wells will begin on November 7, 1977 and will last 90 days.

11. Other Information:

- A. Topography: Land surface is generally level with numerous sand dunes.
- B. Soil: Very loose sand
- C. Flora and Fauna: The vegetative cover is largely mesquite bushes, shinny oak and native grasses. Wildlife includes rabbits, reptiles, dove, quail, and coyotes.
- D. Ponds and Streams: There are no rivers, streams, lakes or ponds in the area.
- E. Residences and Other Structures: There are no residences in the area.
