

- C. The reserve pit will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. Plans for Restoration of the Surface.

- A. After completion of drilling and/or completion operations all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave wellsite in an aesthetically pleasing condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. After abandonment of the well, surface restoration will be in accordance with the agreement with the surface owner. Pits will be filled and location will be cleaned. The pit area, well pad, and all unneeded access road will be ripped to promote revegetation. Rehabilitation should be accomplished within 90 days after abandonment.

11. Other Information

- A. Topography
Land surface is undulating to gently rolling and dunny. From an elevation of 3372.6' at the wellsite, the land surface slopes from toward the southwest at about 20' per mile.
- B. Soil
Soil is a deep fine sand underlain by caliche.
- C. Flora and Fauna
The vegetative cover is generally sparse and consist of shinnery oak, yucca and perenial native range grasses. Wildlife in the area is that of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles, dove and quail.
