Re: Exxon Federal SWD #2-M, 9-26-32

Gentlemen:

We have received the subsequent report on converting the above referenced well to a salt water disposal well.

According to Order R-7973, the packer was to be set at approximately 4400 feet. Your report shows the packer to be set at 4000 feet.

When the packer is pulled for any reason, we request that you set the packer at the depth approved by the order. The standard setting for packers in this type of well is no more than 100 feet above the top perforations.

Very truly yours
