3. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

The intent of the new operator is to pull the tubing out of the hole and then set a plug in the 9 5/8" casing, cut a window in the 9 5/8" casing at approximately 13,100' and then whipstock the hole 700' east to a depth of 15,700'. A 7" Liner will be run from 12,500' to 13,700' and cemented. The Atoka Section will then be tested and completed. Application to whipstock has been filed with the New Mexico Oil Conservation Commission at Santa Fe, New Mexico. This sundry notice corrects the address of the operator.
