

1. Present hook-up for washing cavity of State LPG Storage Well No. 3.
2. The 5 1/2" tubing and the 2" tubing will be raised after the first stage of washing is completed.
3. The process will be repeated until the capacity of the well is calculated to be 50,000 Mbls. The 2" tubing will then be removed and the 5 1/2" tubing will be lowered to the bottom of the cavity at 2677'. The well will then be ready for the storage of LPG products.
