SUNDRY NOTICES AND REPORTS ON WELLS

NOTICE OF INTENTION TO DRILL.....	<input checked="" type="checkbox"/>	SUBSEQUENT REPORT OF WATER SHUT-OFF.....	
NOTICE OF INTENTION TO CHANGE PLANS.....		SUBSEQUENT REPORT OF SHOOTING OR ACIDIZING.....	
NOTICE OF INTENTION TO TEST WATER SHUT-OFF.....		SUBSEQUENT REPORT OF ALTERING CASING.....	
NOTICE OF INTENTION TO RE-DRILL OR REPAIR WELL.....		SUBSEQUENT REPORT OF RE-DRILLING OR REPAIR.....	
NOTICE OF INTENTION TO SHOOT OR ACIDIZE.....		SUBSEQUENT REPORT OF ABANDONMENT.....	
NOTICE OF INTENTION TO PULL OR ALTER CASING.....		SUPPLEMENTARY WELL HISTORY.....	
NOTICE OF INTENTION TO ABANDON WELL.....			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

January 6, 1961

Perry Federal
Well No. 2 is located 1980 ft. from [N] line and 660 ft. from [E] line of sec. 21

NE 1/4 T-25-S R-32-E N. M. P. M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is * ft. * Not yet available. Will be reported when rig is moved in.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill and complete a well in the upper portion of the Delaware Sand, at an approximate total depth of 4810'.

8-5/8" OD new 24 lb. per ft. J-55 casing is to be set in a 12 1/4" hole at 375' and cemented back to the surface with 300 sz. of cement.

4 1/2" OD new 9.50 lb. per ft. J-55 casing is to be set in 7-7/8" hole, on bottom at approximately 4810', and cemented with 100 sz. 50-50 Pennix 21 gel followed by 50 sz. of latex cement, to fill approximately 600' between the casing and the 7-7/8" drilled hole.

The well is to be drilled with rotary tools. Completion will be made by gun-perforating the pay sections, and applying stimulation treatments based on information obtained on preliminary natural tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Title Asst. Div. Mgr.

1. The first part of the report is a general introduction to the project. It describes the purpose of the study and the objectives that were set at the beginning. It also provides a brief overview of the methods that were used to collect and analyze the data.

2. The second part of the report is a detailed description of the data that was collected. It includes information about the sample size, the demographic characteristics of the participants, and the specific measures that were used to assess the variables of interest.

3. The third part of the report is a presentation of the results. It includes a series of tables and figures that show the mean scores, standard deviations, and correlations between the different variables. It also includes a series of paragraphs that describe the results in more detail and provide a summary of the findings.

4. The fourth part of the report is a discussion of the results. It includes a series of paragraphs that interpret the findings, discuss their implications, and compare them to the results of previous studies. It also includes a series of paragraphs that discuss the limitations of the study and suggest directions for future research.

RESULTS AND DISCUSSION

The results of the study are presented in a series of tables and figures. Table 1 shows the mean scores and standard deviations for the different variables. Table 2 shows the correlations between the different variables. Figure 1 is a line graph that shows the change in scores over time. Figure 2 is a bar chart that shows the distribution of scores for the different categories.

The results of the study indicate that there are significant differences between the different groups. The scores for the experimental group were significantly higher than the scores for the control group. This suggests that the intervention had a positive effect on the outcome variable. The results also indicate that there are significant correlations between the different variables. This suggests that the variables are related to each other and that the findings are consistent.

The findings of the study have several implications. First, they suggest that the intervention is effective in improving the outcome variable. This is important because it provides evidence for the use of the intervention in practice. Second, the findings suggest that the variables are related to each other. This is important because it provides information about the underlying mechanisms of the intervention. Finally, the findings suggest that the study has limitations and that there are directions for future research.

The study has several limitations. First, the sample size was relatively small, which may have limited the power of the study. Second, the study was conducted in a controlled setting, which may not be representative of real-world conditions. Third, the study did not include a long-term follow-up, which may have limited the ability to assess the long-term effects of the intervention. Finally, the study did not include a comparison with other interventions, which may have limited the ability to assess the relative effectiveness of the intervention.

There are several directions for future research. First, it would be useful to conduct a larger study with a more diverse sample. Second, it would be useful to conduct a study in a real-world setting. Third, it would be useful to conduct a long-term follow-up study. Finally, it would be useful to conduct a study that compares the intervention with other interventions.

In conclusion, the study provides evidence for the effectiveness of the intervention in improving the outcome variable. It also provides information about the underlying mechanisms of the intervention and suggests directions for future research.

The study was conducted by a team of researchers who are experienced in the field of research. The results of the study are presented in a clear and concise manner, making it easy to understand. The study is a valuable contribution to the field of research and provides important information about the effectiveness of the intervention.

NEW MEXICO OIL CONSERVATION COMMISSION
WELL LOCATION AND ACREAGE DEDICATION PLAT

FORM C-126
Revised 5/1/57

SEE INSTRUCTIONS FOR COMPLETING THIS FORM ON THE REVERSE SIDE

SECTION A

Operator Panther City Investment Co.		Lease No. 11-42		Well No. 2
Unit Letter H	Section 21	Township 25 South	Range 32 East	County Lea
Actual Footage Location of Well: 1980 feet from the North line and 660 feet from the East line				
Ground Level Elev. 3406.7	Producing Formation	Pool	Dedicated Acreage: 40 Acres	

1. Is the Operator the only owner in the dedicated acreage outlined on the plat below? YES ☒ NO ☐ ("Owner" means the person who has the right to drill into and to produce from any pool and to appropriate the production either for himself or for himself and another. 165-3-29 (e) NMSA 1935 Comp.)
2. If the answer to question one is "no," have the interests of all the owners been consolidated by communization or otherwise? YES ☐ NO ☐ If answer is "yes," Type of Consolidation _____
3. If the answer to question two is "no," list all the owners and their respective interests below:

Owner Panther City Investment Co.	Land Description
JAN 6 1961 U. S. GEOLOGICAL SURVEY HOBBS, NEW MEXICO	

SECTION B

CERTIFICATION

I hereby certify that the information in SECTION A above is true and complete to the best of my knowledge and belief.

Name Walter D. Powers
Position Asst. Dir. Mgr.
Company Panther City Inv. Co.
Date January 6, 1961

I hereby certify that the well location shown on the plat in SECTION B was plotted from field notes of actual surveys made by me or under my supervision, and that the same is true and correct to the best of my knowledge and belief.

Date Surveyed
Registered Professional Engineer and/or Land Surveyor, JOHN W. WEST
Certificate No. 5761
