DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Propose to drill and complete a well in the upper part of the Delaware Sand at an approximate total depth of 4750'. Approximately 150' of core is to be out. 8-5/8" OD 24 lb. per ft. grade J-55 casing is to be set in a 12 1/4" hole at 375', and cemented back to the surface with 325 sx. of regular neat cement.

4-1/2" OD new 9.50 #/ft. J-55 casing is to be set in 7-7/8" hole, on bottom, at approximately 4750', and cemented with 165 sx. 50-50 Pozmix 2% gel, followed by 50 sx. of latex cement, to fill approximately 700' between the casing and the drilled hole.

The well will be drilled with rotary tools. Completion will be made by gun-perforating the pay sections, and applying stimulation treatments based on information gained from preliminary natural tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
