The elevation of the derrick floor above sea level is \* ft. \* Not yet available. Will be reported when a rig is moved in.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill and complete a well in the upper part of the Delaware Sand at an approximate total depth of 4750'. Approximately 100' of core is to be cut.

8-5/8" OD 24#/ft. grade J-55 casing is to be set in a 12 1/4" hole at 375', and cemented back to the surface with 300 sacks of regular neat cement.

4 1/2" OD new 9.50#/ft. J-55 casing is to be set in 7-7/8" hole, on bottom, at approximately 4750', and cemented with 165 sx. 50-50 Pozmix 2% gel, followed by 50 sx. of latex cement, to fill approximately 700' between the casing and the drilled hole, top of cement to come well above the base of the salt section.

The well will be drilled with rotary tools. Completion will be made by gun-perforating the pay sections, and applying stimulation treatments based on information gained from preliminary natural tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
