## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well using rotary tools to approximately 4650' to produce the Balconare Sand. 8 5/8" casing will be set at approx. 870' or into the top of argillite and circulating cement to surface. 5 1/2" casing will be set to bottom or to top of production horizon cementing from base of Balconare line to base of salt. Electric logs will be run to total depth. Coring of production horizon running tubing to center of some and free if needed are scheduled. State and Federal Regulations will be complied with. Permission to produce on completion is requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
