The elevation of the derrick floor above sea level is 3322 ft.

#### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Proposal is to set 8-5/8" O.D. 20 lb casing into the Redbed at approximately 250' and circulate cement to surface. To drill 150 feet into the Delaware sand to a T.D. of approximately 5350 feet. To set 4 1/2" O.D. 9.50 lb casing at total depth and cement with 125 sacks or that amount required to return to top of anhydrite. Completion will be through perforations opposite Delaware formation after acid and fracture treatment. The well will be rotary cored and logs run. Approximate spudding date will be May 2, 1961, with rotary tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
