THEORY OF THE EARTH AND ITS HISTORY

by J. H. VAN DIJK

PHILADELPHIA, 1901

The theory of the earth and its history is a branch of geology which deals with the origin and development of the earth and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features, and to determine the time and order of these processes. The theory of the earth and its history is based on the study of the earth's rocks and fossils, and on the principles of geology. It is a science which is constantly developing, and which is of great importance to the human race.
