The deliverability of this dry gas well has decreased from about 600 MCF to about 60 MCF during the past year. Therefore, we plan to frac the well with 15,000 gallons of Low Friction Frac in an effort to increase the deliverability. The well produces from an open hole section in the Yates zone from 2801 to 3032 feet. The entire 231 foot open hole section is to be fraced with 15,000 gallons and about 22,000# of sand down the 5-1/2" casing with an anticipated injection rate of 40 to 50 BPM.
