The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well with rotary tools at the above location to a total depth of approximately 3050', unless commercial gas production is encountered at a lesser depth. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 8 5/8" casing to be set at approximately 250' and cemented with 250 sacks, cement to be circulated; 5 1/2" casing to be set at approximately 2750', or in top of Brown Line, and cemented with 735 sacks.

NE/4 of Section 17 assigned for gas well. (160 acres).

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
