17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work).*

Water injection into the Langlie Mattix zone of this well was authorized by NMOCC Order No. R-4019.

To convert this well to water injection in the Langlie Mattix zone, we propose to perform the following operations:

1. Pull tubing.
2. Clean out with sand pump to T.D. of 3680'.
3. Run cement lined tubing and tension packer. Set packer at approximately 3300'. (Langlie Mattix zone is completed open hole 3320'-3680'.)
4. Commence water injection when injection facilities are complete. Above work is scheduled to commence July 15, 1971.

Note: This is a dual well in the Jalmat (Yates Gas) Pool and Langlie Mattix Pool. The Jalmat zone (perforated 3182'-3278') is also scheduled to be an injection well; however, the Jalmat zone will not be converted to water injection at this time. The well number of the Jalmat zone is No. 310.
