HOBBS, NEW MEXICO

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Propose to increase production by drilling out sand and retrieveable bridge plug, perforating Upper Yeso pay, and acidizing perforations.

After 1972 frac job, RBP set at 5350 was not recovered. Sand and a piece of retainer are thought to be accumulated on top of RBP. If RBP can't be pulled, then it will be necessary to drill it out.

Upper Yeso will then be reperforated between interval 5126-5655. Perforations will be acidized with approximately 8000 gallons 15% HCL in four stages using mothballs as blocking material. Upon completion, well will be returned to production.
