Well No. 1 is located 660 ft. from SW line and 660 ft. from E line of sec. 26
SW 1/4 Sec. 26 T-24-S R-37-E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Mattix Lea County New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3200 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

T. D. - 3475' - Lime

This well was plugged back from 3510' to 3475' with rock, lead wool, and steel cuttings to plug off a shale break and non-productive zone.

The well was shot on 5-18-40 with 240 quarts of nitroglycerine from 3398' to 3475'. The shot was tamped with 2 yards of gravel. Prior to shooting, the well produced approximately 11 barrels oil per day swabbing. After shooting & cleaning out to bottom, the well produced 88 bbls. of oil in 24 hrs. flowing by heads through casing & 2" tubing. A packer will be set in the casing at approximately 3307' in an attempt to make the well flow steadily. A complete report of this packer setting will be made on the well log.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
