THEORY OF THE EARTH

CHAPTER I

THE EARTH is a sphere, and its surface is divided into two parts, the land and the water. The land is divided into continents and islands, and the water is divided into oceans and seas. The continents are the large masses of land, and the islands are the small pieces of land. The oceans are the large bodies of water, and the seas are the smaller bodies of water. The land and water are separated by the coastlines.

The land is divided into countries, and the water is divided into rivers and lakes. The countries are the political divisions of the land, and the rivers and lakes are the natural divisions of the water. The land and water are separated by the coastlines.

The land is divided into mountains and valleys, and the water is divided into streams and rivers. The mountains are the high parts of the land, and the valleys are the low parts of the land. The streams are the small bodies of water, and the rivers are the larger bodies of water. The land and water are separated by the coastlines.

The land is divided into hills and plains, and the water is divided into ponds and lakes. The hills are the low parts of the land, and the plains are the flat parts of the land. The ponds are the small bodies of water, and the lakes are the larger bodies of water. The land and water are separated by the coastlines.

The land is divided into forests and fields, and the water is divided into swamps and marshes. The forests are the areas of land covered with trees, and the fields are the areas of land used for agriculture. The swamps and marshes are the areas of land covered with water. The land and water are separated by the coastlines.

The land is divided into cities and towns, and the water is divided into harbors and bays. The cities and towns are the human settlements, and the harbors and bays are the natural divisions of the water. The land and water are separated by the coastlines.

The land is divided into deserts and mountains, and the water is divided into rivers and lakes. The deserts are the areas of land with little or no vegetation, and the mountains are the high parts of the land. The rivers and lakes are the natural divisions of the water. The land and water are separated by the coastlines.

The land is divided into islands and continents, and the water is divided into oceans and seas. The islands are the small pieces of land, and the continents are the large masses of land. The oceans are the large bodies of water, and the seas are the smaller bodies of water. The land and water are separated by the coastlines.

The land is divided into mountains and valleys, and the water is divided into streams and rivers. The mountains are the high parts of the land, and the valleys are the low parts of the land.
