	is 3167 ft * Undesignated Drinkard
e elevation of the derrick floor above sea level	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg
e elevation of the derrick floor above sea level	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee)
e elevation of the derrick floor above sea level	is 3167 ft. Windesignated Drinkard North Justis (Ellenburg OF WORK Undesignated (McKee) Weights, and lengths of proposed casings; indicate modding jobs, cament- rimportant proposed work)
e elevation of the derrick floor above sea level DETAILS to names of despected depths to objective sands; show sizes, wing points, and all other increase production we propose to despected depths to objective sands; show sizes, wing points, and all other	is 3167 ft. Windesignated Drinkard North Justis (Ellenburg OF WORK Undesignated (McKee) Weights, and lengths of proposed casings; indicate modding jobs, cament- rimportant proposed work)
DETAILS the name of the derrick floor above sea level DETAILS the name of the expected depths to objective sands; show sizes, wing points, and all other increase production we propose to d l. Acidize Ellenburger section from regular 15% ISTNE HOL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name a description of the derrick floor above sea level DETAILS to name a description to objective sands; show sizes, voing points, and all other increase production we propose to d l. Acidize Ellenburger section from regular 15% ISTNE HOL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name and described depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HCL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name a despected depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HCL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name and described depths to objective sands; show sizes, wing points, and all other increase production we puspose to d l. Acidize Ellenburger section from regular 15% ISTNE HCL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name and described depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HCL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name and described depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HCL Acid.	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg F OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate midding jobs, cement-rimportant proposed work) o the following work. m 84531 to 84621 with 1500 gallons of
DETAILS to name and despected depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HOL Acid. Swab well, test, return well to	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate modding jobs, cement-important proposed work) o the following work. m 84531 to 84821 with 1500 gallons of production.
DETAILS to name and despected depths to objective sands; show sizes, ving points, and all other increase production we propose to discussed and increase production we propose to discussed and all other regular 15% ISTAE HOL Acid. 2. Swab well, test, return well to	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate modding jobs, cementrimportant proposed work) or the following work. m 84531 to 84321 with 1500 gallons of production.
DETAILS to name a conference depths to objective sands; show sizes, ving points, and all other increase production we propose to do l. Acidize Ellenburger section from regular 15% ISTAE HOL Acid. 2. Swab well, test, return well to	is 3167 ft. ** Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate modding jobs, cement- rimportant proposed work) o the following work. m 84531 to 84321 with 1500 gallons of production.
DETAILS to name and despected depths to objective sands; show sizes, ving points, and all other increase production we propose to d acidize Ellenburger section from regular 15% ISTNE HCL Acid. 2. Swab well, test, return well to	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate modding jobs, cementrimportant proposed work) or the following work. m 84531 to 84321 with 1500 gallons of production.
DETAILS The names of the derrick floor above sea level DETAILS The names of expected depths to objective sands; show sizes, ving points, and all other of increase production we propose to d 1. Acidize Ellenburger section from regular 15% ISTNE HOL Acid. 2. Swab well, test, return well to	is 3167 ft. * Undesignated Drinkard North Justus (Ellenburg OF WORK Undesignated (McKee) weights and lengths of proposed casings; indicate modding jobs, cementrimportant proposed work) or the following work. m 84531 to 84321 with 1500 gallons of production.
