North Justis (Waddell)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To increase production on the following well we propose to do the following work:

1. Acidize McKee section from 8050' to 8119' in two stages each consisting of 1000 gallons LST NEA 15% with 250 gallons gel acid carrying one lb. per gallon naphthalene between stages. Limiting the bottom-hole treating pressure to an amount less than the bottom-hole collapse pressure of the 2 3/8" casing.
2. Swab, test, and return to production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
