(State or Territory)

*Drinkard

Fusselman

McKee

Waddell

Blinebry

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Note: This well was originally completed in the (Drinkard), (Fusselman), (McKee), (Waddell), and (Siluro-Devonian) zones. Due to a communication between zones and after reworking the well the (Siluro-Devonian) zone proved to be non-productive and was abandoned. The well was then completed in the Blinebry zone.

The well now has the (Drinkard), (Fusselman), (McKee), (Waddell), (Blinebry), zones. After reworking the well the Fusselman zone will be re-potentialled.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
