Well No. B-1 no. 2 is located 1650 ft. from N line and 660 ft. from W line of sec. 1SW 1/4 of NW 1/4 of Sec. 1 25 S. 37 E. N. M. P. M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)Langlie-Mattix (Extension) Lea N. M.
(Field) (County or Subdivision) (State or Territory)The elevation of the derrick floor above sea level is 3129 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well, using rotary tools, to 3,500' or exposing the Queens Sand to production test. The proposed casing program is approx. 900' of 8-5/8" 24# new csg., J-55 sals., or anchoring in solid anhydrite; cementing with 300 sks. cement, or circulation to the cellar. To set approx. 3450' of 5 1/2" J-55 new 14.00# sals. csg. using 300 sks. cement or to the base of salt. To run temperature log to determine top of cement on production string, to run gamma-ray neutron log to total depth and to complete by perforating casing and sandfrac methods. To produce in accord with State and Federal Regulations.

Permission is herewith requested to produce this well upon satisfactory completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
