New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 3136 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casing; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth - 3480' line.

Desire to shoot this well with approximately 330 quarts of nitroglycerin from 3370' to 3480', to increase the production of the well. The shot will be tamped with approximately 1/2 yard of pea gravel.

Results of the shot will be reported with ten days after shooting and cleaning out.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

REPORT OF THE GEOLOGICAL SURVEY ON THE

The following report was prepared by the Geological Survey of the United States Department of the Interior, in response to a request from the Department of Defense, dated October 10, 1968. The report is based on a study of the geological resources of the United States, and is intended to provide information on the availability and distribution of these resources. The study was conducted by the Geological Survey, and the results are presented in this report. The report is divided into two main sections: a description of the geological resources of the United States, and a discussion of the availability and distribution of these resources. The first section describes the various types of geological resources found in the United States, including minerals, fossil fuels, and geothermal energy. The second section discusses the availability and distribution of these resources, and the factors that affect their use. The report concludes with a summary of the findings of the study, and a list of recommendations for further research and development.

1. The following report was prepared by the Geological Survey of the United States Department of the Interior, in response to a request from the Department of Defense, dated October 10, 1968. The report is based on a study of the geological resources of the United States, and is intended to provide information on the availability and distribution of these resources. The study was conducted by the Geological Survey, and the results are presented in this report.
