DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill this well to an approximate depth of 330 feet with rotary tools and set casing as follows:

3-5/8" O.D. 32# J-55 surface casing at approximately 110 feet and circulate cement to surface by using approximately 400 sz cement.

5-1/2" O.D. 15.5# J-55 casing at approximately 330 feet and run sufficient cement to circulate cement to the base of 3-5/8" casing.

We plan to complete well by perforating casing and installing a completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
