0746 m 124 124 17. Describe Proposed or Completed Operations (Clearly state all periment details, and give pertiment dates, including estimated date of starting any proposed work) sets RULE 103. This well had been producing as a Skelly Jalmat (Yates) Gas well and as an injection well in the Langlie-Mattix Oil Zone as Union Texas Petroleum's Langlie Jal Unit Well No. 33. Both zones were shut in July 25, 1972, due to an apparent casing leak; and we propose plugging the Jalmat Gas Zone, repairing the casing leak and returning the Langlie-Mattix Zone to Union Texas as follows: 1) Rig up pulling unit and pull downhole equipment. 2) Repair hole in surface casing immediately below bradenhead. 3) Run packer and set bridge plug at 3075'. Spot sand on top of bridge plug and set packer at 2700'. 4) Squeeze Jalmat Gas Zone perfs. 2830-3055' with 300 sacks of expanding cement, limiting squeeze pressure to less than 1000# to prevent communication with oil zone below. Pull packer. 5) Drill out cement and clean out to top of bridge plug. Test casing to 500#. Retrieve bridge plug. 6) Rerun downhole equipment and turn over operation of well to Union Texas Petroleum. 18. I hereby certify that the Information above is true and complete to the best of my knowledge and belief. starte Orig. Signed by Jalmat beta D.
