Well No. 3 is located 1900 ft. from N line and 000 ft. from E line of sec. 6-25-37

6 SE NE 6 (1/4 Sec. and Sec. No.) 25S (Twp.) 37 E (Range) 10-5-37 (Meridian)

Langlie (Field) Los Cruces (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is ..... ft. will furnish later

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Since no water whatever was found in Langlie #1, C SE SE 6-25S-37E or in Wells #1, C SE SE 6-25S-37E, above 450', both wells having been drilled with cable tools, it is proposed to eliminate entirely the 13" OD - 40# surface casing which was to have been set at 200' according to approved "Notice of Intention to Drill". 2-5/8" - 36# Seamless Casing is to be set at approximately 1200' or on top of salt and cemented with 150% of the calculated amount of cement necessary to cement the string from top to bottom. If cement does not return to surface when plug is pumped down, sufficient cement will be dumped around 2-5/8" casing to finish cementing it back to surface.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
