February 2, 1953

Well No. 6 is located 1080 ft. from SW line and 2310 ft. from E line of sec. 8

NW 1/4 Sec. 3 (1/4 Sec. and Sec. No.) 27E (Twp.) 37E (Range) T.M.P.M. (Meridian)

Langlie-Lattir (Field) Lea (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 3150 ft. approximately.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a well on the above described location to a total depth of approximately 3300'. The following casing and cementing program is proposed; Set 10-3/4" or 9-5/8" casing at 300' and cement with sufficient amount of cement to circulate. Drill through the Yates Sand to approximately 2800', drill stem test the Yates Sand, then set 7" or 5-1/2" casing and cement with 200 sacks. Well will then be drilled to total depth of approximately 3300' and completed in the open hole in the Langlie Pay. Since this well is to be drilled in an area east of the commercial potash deposits, no means of protecting the salt will be initiated; as per verbal permission from Mr. Russell, Acting District Engineer.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
