(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3139 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

This well makes a small percentage of water, and to determine whether or not the casing is leaking, a Hookwall packer is to be run on 2-7/8" tubing and set at approximately 3207'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
