DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well presently pumps from the Fusselman through perforations at 6996' to 7017'.

We propose to dual complete in the Brinkard by running 2 parallel strings of tubing and setting a permanent production packer at approximately 6800' to provide separation of the two zones. The Brinkard will be perforated from 5944 to 5990' and a dual packer set at approximately 5900'.

ILLEGIBLE

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
