#### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a TD of 6000', set 9-5/8" OB 36# cag at approximately 850' and circulate sement to surface. We propose to set 7" casing at TD and cement with a calculated volume of cement that will bring cement to surface casing. Dual completion will be made in the Blinebry and Tubbe or Blinebry and Paddock somes thru 2 parallel strings of tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
