1. The first step in the process of the development of the railway network in the USSR was the construction of the first railway line between Moscow and St. Petersburg in 1825. This line was built by the private entrepreneur, the Count Shchegolev, and it was the first of many lines that were built in the following years. The construction of the railway network was a long and difficult process, and it was not until the 1850s that the network began to take shape. The first line was built between Moscow and St. Petersburg, and it was followed by lines between Moscow and Nizhny Novgorod, and between Moscow and Kazan. The construction of the railway network was a major achievement of the Russian government, and it played a key role in the development of the country.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28 °C. The cell concentration of the strains was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28 °C. The plant tissue was then cultured on the selective medium. The transformation efficiency was calculated as the number of transformants per 100 mg of plant tissue. The data were the mean of three independent experiments.
