NOTICE OF INTENTION TO ABANDON WELL			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. 1 is located 330 ft. from [S] line and 330 ft. from [E] line of sec. 14
SE/4 Sec 14 23E 37E N.M.P.M.
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Justin Blinney & Prichard Las New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3109 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a TD of 6000'. 13-1/8" casing will be set at approx. 850' and cement circulated to surface. A 12-1/4" hole will be drilled to approx. 1300', and if gas is encountered a string of 9-5/8" casing will be set at 1300' and cement will be brought to base of 13-1/8" casing. If no gas is encountered at 1300', 9-5/8" casing will not be run and hole size will be reduced to 8-1/4" to T.D., 7" casing will be set at T.D. and cement will be circulated to bring cement around 7" casing back to surface casing. Dual completion will be made in the Blinney and Prichard zones through two (2) parallel strings of tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
