		Date 2-8-65		<u> </u>	

1. A packer leakage test shall be commenced us each all tiply completed well within seven days after actual completion of the sell; and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and when-ever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that com-munication is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall motify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

5. The packer leakage test shall commence when both zenes of the dual completion are shut-in for pressure stabilization — both zenes shall remain shut-in until the well-head pressure in each take should deal and for a minimum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

i. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing well-hard pressure has become stabilized and for a minimum of two hours thereafter provided however, that the flow test need not continue for more than 24 sours

.

....

• • ;

5. Following completion of Flow Test No. 1, the well shall again be shuthin, in accollate with Paragraph S surve.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall re-main shut-i, while the previously stut-in zone is produced.

as for now rest no. representation previously produced zone shall term main shuffly while the previously stuffly zone is produced.
7. All pressures, throughout the entire test, shall be continuously measured an recorded with recording pressure gauges, the accuracy of which must be checked with a declarizer tester at least twice-once at the beginning at some at the end of the filled is triplomate witch must be checked with a declarizer tester at least twice-once at the beginning at some at the end of the filled is triplomate witch must be checked with a declarizer test. Tests shall be filled is triplomate witch must be declarizer to an flow test.
8. The rest is of the incorrecter time tests shall be filled is triplomate within 15 dars after comparison is the test. Tests shall be filled is triplomate within 0.5 dars after comparison the test. Tests shall be filled with the appropriate bilarizer to filled on the New Mexico fill Conservation dom-sission on the rest is weaked the leakage Test Form Revised Hill-58, together with the original pressure tourding gauge charts with all the deadweight pressure which with the operator may construct a pressure versus time curve or math each test indicating thereon is increased which and the test indicating thereon all dead-weight press to include the time gauge charts as reli as all dead-weight press to include the time task or permanently filed in the operator's office. For the sheat test is deal test period.
