The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill with rotary tools a well for gas production to a depth of 1000' unless gas is encountered at a lesser depth. All casing points will be cemented or mudded by approved methods of the U.S.G.S. and any other special requirements will be complied with. The following casing will be set in this well: 9-5/8" OD casing will be set at about 1150' and cemented to surface with 440 sacks cement. 7" OD casing will be set at top of pay and cemented with 425 sacks cement.

Approval to produce this well on completion is also requested.

Approval is also requested to shoot or acidize this well in process of completing same.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
